THEN SOW **Super Giants**

WILT RESISTANT SUPER GIANTS ASTERS

Largest of all Asters and a superb cutflower because of its long, wiry, non-branching stems, Super Giant lacked only wilt-resistance and a wider color range. This new strain has taken fifteen years to perfect without sacrifice of size and type, but at last (in spite of a crop failure last year due to unusual causes) we can now offer *wilt-resistant Giants* in the following colors: **BEVERLY HILLS** (azure), **EL MONTE** (crimson), **HOLLYWOOD** (white), **PASADENA** (peach blossom), **LOS ANGELES** (shell pink), and **SANTA BARBARA** (purple) plus a blended **MIXED**.

Generally in the Cactus flowered type but with petals more curled. Color is most unusual in Zinnias — a glowing salmon pink unavailable up to now. Plants are 2'-2 1/2' high with regular Zinnia foliage. Definitely recommended as a color in the distinct new cactus flowered class now emerging.

Why the Mystery?

Why Shouldn't You Know What Is in a Good Lawn Grass Seed Mixture Before You Buy It You Should Know What You Are Buying

- FACT 1** The more Certified Illahee Creeping Fescue and Kentucky Blue Grass a mixture contains, the better the mixture.
- FACT 2** Both are Perennials and live indefinitely. However, they require two or three years to reach full maturity.
- FACT 3** Meanwhile they need quick-growing Red-Top and Rye Grass as nurse crops to shade them in their early growth.
- FACT 4** Your first year's lawn is mostly Red Top and Rye Grass.
- FACT 5** After a few years, Certified Illahee Creeping Fescue and Kentucky Blue Grass will be at their best; they form the permanent lawn.

BURNETT-SEEDSMEN'S "FORMULA NO. 1" is a NO. ONE

Lawn Grass Seed Mixture, because it is made up of 25% Illahee Fescue—25% Kentucky Blue—25% Red Top—25% Rye Grass. Burnett-Seedsman's "Formula No. 1" is a balanced mixture. Burnett-Seedsman's "Formula No. 1" will grow in sun or shade.

BUILD LAWNS IN POOR SOILS WITH BURNETT-SEEDSMEN'S "POORSOIL LAWNMIX"

Drouth Resistant grasses is the answer to establishing a lawn in poor, sandy soils, for the same reason that camels, not horses, are used in the desert. - - So, Burnett-Seedsman have selected the best drouth grass, namely, **Creeping Red Fescue (Illahee strain)**. Because of it's tolerance of drouth, Illahee is especially adapted to dry, sandy or gravelly soils—poor or rich. Illahee Creeping Red Fescue produces a deep rooted sod that withstands tramping and abuse. It spreads out, carpet-like, by means of underground rootstocks and overground stems. The grass blades are rich green, fine, smooth and soft; they stay green when other grasses brown and sear in Summer. Illahee is disease resistant; stands close cutting; grows in sun or shade and reaches full maturity in two years. It grows well with **Highland Bent**, also included in **Burnett-Seedsman's Poorsoil Lawnmix**. **Highland Bent's** growth habit somewhat parallels Illahee Fescue, especially being able to withstand adverse conditions of climate and low soil fertility. To these two permanent grasses is added a small percentage of domestic Rye Grass which acts as a nurse crop. **Burnett-Seedsman's "Poorsoil Lawnmix"** contains 75% Illahee Fescue, 5% Highland Bent and 20% domestic Rye grass, by weight.

By including sufficient quantities of the shade loving grasses along with comendous amounts of the choicest dwarf and creeping grasses, you may be assured of a successful lawn in the shade. Remember, in shaded situation where the sun's rays do not permeate sufficiently to dry the ground, a damp and acid condition exists. ZOYSIA JAPONICA (Japanese Lawn Grass)

CROWDS OUT CRABGRASS

Zoysia japonica, commonly known as Japanese Lawn Grass, was first introduced into the United States about 35 years ago from Korea where the climate approximates that of New York State.

Zoysia japonica is a low growing, sod forming perennial which if not mowed, will grow to a height of about 9 inches. It has a broad, somewhat course leaf similar to Red Top, but does not grow as tall.

Zoysia japonica is the only variety of *Zoysia* which is hardy and will grow in the South as well as in the North. It should never be confused with *Zoysia matrella* which is of value only to the southern end of Florida where it is sold as sod under the name of Flawn.

It is generally believed that *Zoysia japonica* will be of great value for the following reasons:

- (1) Its ability to withstand heat, long periods of drought and extremely cold climates.
- (2) Its ability to crowd out Crabgrass as it is most dominant during the Crabgrass season.
- (3) Its ability to provide a green cover during the summer months when other grasses, such as Kentucky Blue, turn brown and ragged. It will also hold its color into the late fall longer than others.
- (4) Its ability to withstand heavy traffic and its extraordinary healing qualities.
- (5) The fact that it is disease free and weed free. So far none of the known pests have attacked it. It is immune to Chinch Bugs.
- (6) Unlike its cousin Flawn, *Zoysia japonica* forms a loosely knit sod and in its early stages blends and lives in harmony with other grasses, especially Blue Grass.

Pound sows 600 sq. ft. area.

PETUNIA COMANCHE (F-1 HYBRID)

Bronze Medal

It is the reddest of red petunias, richer, brighter, more uniform scarlet red and also somewhat larger than Fire Chief, Gold Medal winner of 1949.

Its hybrid vigor makes this a grand bedder, standing erect in most weather. Its more abundant, more brilliant, larger flowers on stronger

plants make Comanche rather outstanding in this unique color range. Also, it seems to hold its red color under shady and foggy conditions and on aging much better than Fire Chief. Single flowers, $2\frac{1}{2}$ to $2\frac{3}{4}$ inches in diameter, have superior substance and provide valuable cutting material. Pkt. 50c

ALYSSUM
Royal carpet

ROYAL CARPET ALYSSUM

TOP '53 ALL-AMERICA WINNER

awarded a Silver Medal by the reviewing committee. Of the procumbens type, it is only a couple of inches high but spreads to 10 or more inches across and is covered with a sheet of bloom over a long season. Called a vibrant purple companion to the popular flat white variety, Royal Carpet is very uniform in type and color, for perfect edgings and ground cover.

Royal Carpet is the first new alyssum in twelve years. It is most easily grown from seed and is always in bloom. A very popular garden annual for ground covers and for edging beds, walks, drives and planting in rocks and walls, Royal Carpet is much flatter and more attractive than Violet Queen. Pkt. 25c

Particularly useful where a Petunia deeper and richer than Celestial Rose is wanted. Pkt. 25c

GOLDEN FLEECE

Looking for something really unusual? Here's an annual that will stand any amount of hot weather, germinates so fast you have to jump back when planting, laughs at pests and diseases and will cut-and-come again all summer long. No, it's not a Zinnia but a new giant form of Ostrich Plume or Feathered Cockscomb called Golden Fleece. Plumes are huge and dense, on long cutting stems, dozens of them to the plant — a florist's cutflower as well as a showy border plant. Pkt. 25c

ASTER

NEW EARLY GIANT COLORS

The earliest of all the long-stemmed Ostrich Feather Asters is Early Giant — 1 1/2' plants used for bedding and cutting. This year we introduce to the type Azure, Crimson and White, which virtually complete the color range and allow us to offer a blended Mixed as well. Pkt. each 25c

ASTER

NEW BOUQUET TYPE

"Puff-ball" flowers are borne as a bouquet all at the top of this brand-new class of aster for the professional. Developed specifically for a market cutflower, the strain bears flowers completely double even when full-blown, on strictly upright plants to be cut as one bunch. Each plant takes very little space, although producing a wealth of bloom. Highly wilt-resistant, Bouquets produce spectacular landscaping effects when planted behind branching types — the result is a ribbon of solid color of even height. Plants grow 24" high, flowers are 3"-3 1/2" in diameter with strong stems.

MAKE ROOTED CUTTINGS of Those Rare "HARD-TO-ROOT" Plants

PARADISE (New '41)

Here is an asparagus that actually
 comes into bearing **ONE YEAR**
EARLIER than any other variety.
 An exceptionally strong, vigorous
 producer. Some say it produces
 twice the crop of ordinary aspara-
 gus. The stalks are like Martha
 Washington in appearance, large
 and green. Just imagine, only 6 to
 8 stalks needed to make a pound.
 Its flavor is unusually mild and
 liked by all. Paradise is rust-
 resistant. Seed sown in Spring
 will bear asparagus for picking 2
 years later. One year old Para-
 dise roots, set out this Spring,
 will produce next year, asparagus
 as large and stalky as ordinary
 two- and three-year-old roots.

Roots: 1 yr. old—100, \$5.00.
 2 yr. old—100, \$6.00.

 week intervals to obtain continuous crop
 until late Fall. Beets are tenderest when
 picked young. Fertilize with Potash.

Krilium*

soil conditioner

What will a soil conditioner do?

The mere surface application of *any* soil conditioner will *not* break up hard, crusted soil. It will *not* create good soil structure. That still has to be done mechanically and by hand—it cannot be done while seated comfortably on the lawn or in the garden.

There is no "magic" liquid or powder that will break up soil like this merely by applying it to the surface. But Krilium will keep soil broken up, once that has been properly done by hand or by machine.

To be effective, a conditioner must be applied to soil which has been broken down into proper particle size. (With Krilium, the conditioner can be worked into the soil at the same time it is being broken up. Only one dual-purpose operation is required.)

How deep?

In building a new lawn, or repairing an existing one (see above), penetration to a fraction of an inch may be sufficient to hold the soil surface in place during germination of the seed. However, this is simply erosion control—for real benefit to grass roots, treatment of ½ inch and more is recommended.

Monsanto's own supply source

The Merloam formulation of Krilium is the only one on the market today that does not contain acrylonitrile... Instead, it is based on a modified vinyl acetate maleic acid compound in continuous and plentiful supply—selected by Monsanto after original field tests proved it from 30% to 300% more effective than acrylonitrile, depending on type of soil treated.

How about cost of treatment?

Regardless of conflicting claims, there is but one correct way to figure cost—on the basis of depth treated!

For instance—with equal amounts of the Krilium home-gardening formulation, it is possible to treat 6 times as many square feet to a 1-inch depth as can be treated to a 6-inch depth, or 12 times as many to a ½-inch depth! Simple arithmetic demonstrates this to be most economical for home-garden use.

KRILIUM. Soil Conditioner. Conditions soil in the garden, for new lawns, for shrubs or planting boxes. 5 lbs. will treat about 100 sq. ft. 3 inches deep, or 600 ft. ½ inch deep. The price of 1 lb. \$1.69, postpaid \$1.85; 5 lbs. \$6.95, postpaid \$7.35.

KRILIUM (Loamaker). Highly concentrated 100% active. Treats five times as much area as regular KRILIUM. 10 lb. canister \$34.50, 25 lb. fiberpak drum, \$84.50, 50 lb. fiberpak drum, \$166.25.
